Experience

09/2020 – Present
Broadridge Financial Solutions,
Toronto, ON

Frontend Developer

- Created dynamic layouts catering to the finance and insurance sectors using Angular and Unqork platform. Implemented REST API methodology for frontend backend communication.
- Made use of advanced components like Initializers, plug-ins, Data workflow, Data Grids, Decisions and excel formulas to achieve usability. Performed automated testing using Jenkins when my branch was merged with master.
- Documented changes made to the screens in JIRA stories for developers, QA and BAs to track development & understand the flow. Used Agile Scrum Methodology with JIRA for development.
- Collaborated with Scrum team for Sprint planning, points allocation, Release Planning, Refinement Session and Solution offering.
- Assisted manager in interviewing potential new hires, providing professional opinion of candidate proficiency.

07/2020 – 09/2020
Life Cycle Systems,
Misssissauga, ON

Frontend Developer (Internship)

- Created a generic report generation module for a college / university client using technologies like Angular 10, Material IO, Flex Layout and HighCharts.

- Created a dashboard that had multiple charts handy for the logged in user. The charts included a bar chart, pie chart, line chart and area chart. Made use of REST API response for building the charts.
- Assisted a team of senior developers, in addition of a customizable report creation module, which had drag and drop features for the fields based on the table user selects.

08/2019 – 03/2020
Cloud Consult LLC
Brampton, ON

Junior Full Stack Developer
- Reviewed project specifications and devised solutions for use across multiple websites.
- Contributed to front-end development by creating creative landing page designs and navigation using advanced frameworks Vue.js that achieved usability requirements. Implemented Vuex to have a central store of variables and methods.
- Used Vue-Material, BootstrapVue, Vuetify, Tailwind CSS and other libraries to produce user-friendly components and implement quick creation of responsive application.
- Contributed to back-end development in creation of RESTful API endpoints using Laravel as well as Node.js and perform CRUD operations with Mongoose library for MongoDB. Fetched API data using advanced front end technologies like Vue JS.
- Implemented bearer-token based authentication using Laravel Sanctum.
- Enhanced existing applications by implementing the Vue Routers (to achieve Single-Page-Application).
- Written Unit Test Cases using Jest and consistently had least number of bugs when my code was reviewed by QA.
